

Pall Mall Car Park, Liverpool

Case Study

Tynedale Specialist Flooring Contractors of Knutsford in Cheshire, have completed the installation of Sikafloor deck surfacing systems on the Pall Mall Car Park in central Liverpool. This is for Bruntwood Estates who are a commercial property development and management company, focussed on providing high quality office and serviced office facilities in the North of England.

NCC provided the crack bridging and UV light resistant Sikafloor 350 Elastomeric system, for the top decks as they are subject to external weathering and the greatest thermal movement. The Sikafloor 261 system was recommended by **NCC** and used for the lower decks and the ramps, because of its excellent abrasion and wear resistance.

The clients selected degree of slip resistance was incorporated into the surfaces, then the final lane markings were applied.
