

The Aga Shop, Chester

Case Study

As part of the 'Big Blue' redevelopment project in Chester, a new prestige Aga Store has been opened on the ground floor, below the new luxury residential units in the building above. The development was designed by local architect Andy Foster and the main contractor was CG Construction Ltd of Wrexham.

On the new concrete floor slabs of the ground floor, a suitably tough and hard wearing, non dusting and yet decorative floor finish had to be provided on which to display the Aga range in the store.

Specialist contractors Decon Ltd were approached and together with **NCC**, their materials consultants and suppliers, provided a solution with a Sikafloor 261 self levelling system in a light grey colour.

Now the store is fully open and the manager says that he is 'absolutely delighted and impressed with the floors - as are his customers.'
