## Case Study

Flavours and Essences UK Ltd, the UK market leader, wanted a hard wearing, chemically resistant and easily cleaned floor for phase two of their new facility in Blackburn.

The floors had to provide a surface that was almost to 'cleanroom' environment standards, to meet the company's stringent requirements.

Following **NCC's** proven advice and results with phase one of the new build facility, they had no hesitation in consulting **NCC** once again.

**NCC** provided the solution using Sikafloor Purcem 20, a high performance polyurethane resin screed, with Sikafloor 280 epoxy resin for precise coving and detailing works. Sikafloor 261 was used for easy to clean surfaces in the logistics areas.

Once again, **NCC** also introduced competent local contractors, and the works were completed by P J McGrath and Sons Ltd., to the client's total satisfaction.
